

# TANKS & VESSELS

**GaUS** vessel & tank anodes are cast in one of two premium aluminum alloys, for optimal performance in any conditions. Anodes are manufactured in several "standard" sizes, shown in the following pages.

Core length comes standard depending on the size. Heater Treater Anodes can be supplied with Red/Blue caps and nuts upon customer's request.

In addition to these, **GaUS** can cast anodes for any sort of tank bottom or vessel interior to the exact specifications required. Please contact us for advise on optimizing an anode to suit your specific requirements.

- Weight based on Aluminum alloy; also available in Zinc or Magnesium alloys.
- When ordering, please specify metal and chemical composition.
